

ORCHESTRIA AND THE INFORMATION BOUNDARY

The network perimeter has all but vanished.
Don't let electronic communication control vanish with it.

Corporate networks are becoming increasingly interconnected through the use of VPNs, peering points, satellite offices, and outsourced IT facilities. This interdependence has all but erased the notion of a clearly defined network perimeter.

While many perimeter technologies address external communication issues, only Orchestria extends coverage to include threats from within which can easily comprise up to 50% of all electronic communication. And we do this across all channels. No other company provides the coverage of both external and internal electronic communication to ensure that every message is fully compliant with corporate standards, regulatory requirements, and the need to secure confidential information.

Fast Facts

- Distributed and fully redundant architecture ensures complete coverage of both external and internal electronic communication.
- Discover, alarm and take action on regulatory, corporate, and security violations.
- Apply highly accurate policy in real-time to stop non-compliant messages from being sent.
- Benefit from highly accurate and field-proven PolicyPaks that are developed by industry experts and speed your time-to-compliance.

The Orchestria Solution

Orchestria provides Electronic Communication Control (ECC) that encourages appropriate employee behavior, ensures regulatory compliance, and secures confidential data. Only Orchestria controls threats across all electronic communication channels and provides integration with leading archive vendors, giving customers an unprecedented level of control for the full life of a message. Orchestria's family of control solutions is powered by highly accurate and adaptable policies that drive our core approach. Our Real-Time Prevention™ accurately detects policy violations before messages are sent, Intelligent Review™ targets only the messages that matter, and Smart Tagging™ categorizes all messages as they reach the archive.

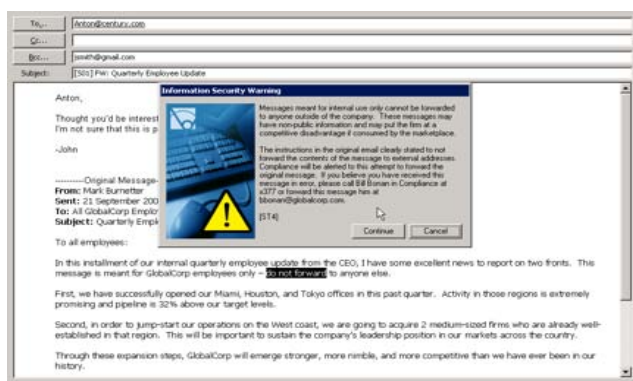

Orchestria and The Information Boundary

Electronic communication has been called “the great engine of truth” because this is where employees “let down their hair” and make off-the-cuff comments between departments. That’s why today’s leading organizations have implemented Orchestria across their enterprise to detect, prevent and deter non-compliant activity across all their electronic communication channels.

More about Orchestria and The Information Boundary

Orchestria integrates with LDAP and Active Directory so our solution always recognizes the roles of individual employees and what specific policies should apply to them. In addition, our document classifiers can apply policy to literally hundreds of different types of documents to ensure that attachments are also free of violations. This type of blanket coverage ensures that all channels of electronic communication, both internal and external, are fully compliant. Furthermore, Orchestria is able to process all electronic communication including encrypted messages and password protected files – something that is not possible with perimeter based solutions.

Contact details

New York | Orchestria
 437 Madison Avenue
 New York, NY 10022
 Tel +1 212 364 5300
 Fax +1 212 364 5301

London | Orchestria
 One Canada Square, 29th floor
 Canary Wharf, London E14 5DY
 Tel +44 (0) 870 850 5401
 Fax +44 (0) 870 850 5402

The Orchestria solution will:

- Utilize pre-built PolicyPaks developed by industry experts and validated in customer environments
- Deliver accurate real-time protection that guides the user with specific instruction on how to resolve violations before a message is sent
- Apply highly accurate policy that alerts the designated administrators of all potential violations in real-time
- Cover all communication channels-from corporate e-mail, BlackBerry™, Web-based activity, Web browser usage and instant messages
- Deliver the only real-time enforcement for Bloomberg Professional™ service (not post-activity logs)
- Covers both internal and external communication; both encrypted messages and password protected attachments
- Comprehensive supervisory workflow with the ability to find, flag, approve, export and audit a message. Send messages and escalate issues to upper management-all in one single application
